

IP: THE KEY TO CONTROLLING COST

Our R&D projects in the pipeline, with differing feasibility:

Re-design the front end UI for the predictive technology

Operating System: Linux -> Plan 9-like, leaner, with many “cloud-like” features built-in

Neural Network framework: TensorFlow/PyTorch -> a pure autodiff framework, reduces install size from 1GB to 100KB, opens door to deployment on wearable device

Generative AI: ChatGPT -> a leaner architecture that generates one or few “thoughts” at once, energy-efficient
