IP: THE KEY TO CONTROLLING COST

Our R&D projects in the pipeline, with differing feasibility:

Re-design the front end UI for the predictive technology

Operating System: Linux -> <u>Plan 9</u>-like, with many "cloud-like" features in a small build

Neural Network framework: TensorFlow/PyToch -> a pure autodiff framework, reduces install size from 1GB to 100KB

Generative AI: ChatGPT -> an architecture that generates one or few "thoughts" at once, energy-efficient
